

SWING GATES

Our swing gates are ideal for securing car parks, lane ways or other restricted areas. The gate features a rigid steel construction, and a tubular sleeve mounted on bushes to ensure easy movement. The gates can be finished in a variety of colours to suit your application or corporate environment. Our standard gate is supplied with a latch post for locking the gate (via padlock). Where the opening is more than 6 metres, we recommend using two gates locked centrally with a removable post.

Options include sign plates for advertising your company name, and additional latch posts for locking the gate in the open position. For applications with limited opening space, ask about our manual boom gates.

- Economical approach to access control
- Rigid, galvanised steel construction
- Easy to use
- Supplied in kit form for easy transport and installation
- Made to measure and coloured to suit
